mLink Software

To use CodyNick’s IDE, you must first download and install the mLink software. This is required in order to establish connection between your computer and CodyNick gadgets.

mLink is available on many devices with different operating systems, but we recommend that you use Windows devices to code with CodyNick as they are the most compatible.

Click on one of the links below to download mLink for your device:

Download for Windows

Download for all other devices

Linux: .deb .rpm

Please reach out to us if you encounter any issues with the IDE or with mLink.
